

*B. arborescens* var. *oxyphylla* hedged!

*B. 'Concord'* (was known as *B. 'Richmondensis Purpurea'*). A beautiful small shrub-like begonia which has bronze foliage. It loves a high light level and will be quite happy where it receives an hour or so of direct sun. It needs regular tip pruning to retain a good bushy habit. For best results this one should be mass planted – at least six plants in the one clump.
